

VisiFone™

The First Digital Home Telephone

Your cell phone, DVD player, TV, PC and cable/satellite system are all digital. The lone holdout in the digital revolution has been the home telephone! Now, thanks to high-speed Internet connections and the VisiFone, your home telephone can have the benefits of the digital revolution.

Digital Audio Quality

The VisiFone enables you to use your cable modem or DSL connection to hear CD-quality audio and to see TV-quality videophone calls and much, much more. **The VisiFone is the very first Digital Home Telephone for VoIP.** It will revolutionize the way you use the phone at home.

Digital Broadband Deserves a Digital Telephone

All VoIP services today are still limited by the 100-year-old analog telephone found in every U.S. home. The VisiFone is the first Digital Home Telephone to enable all of the benefits of your digital broadband connection with new features not possible on your existing home telephone.

Amazing Digital Audio

You wouldn't listen to music on your AM radio, it sounds far better on a digital CD stereo. That is the difference between your current home phone and the VisiFone. The 3Dsound™ of the VisiFone is truly amazing. It allows you to hear emotions and words in crystal clear, digital WideBand audio quality for the first time.

See and Be Seen

For years you have been promised the ability to see and be seen during a telephone call, across town or across the country. Thanks to broadband and the VisiFone, making a TV-quality video call is as easy as making a telephone call. And with the privacy mode, you are only seen when you want to be.

The VisiFone can also send and receive both voice and video mail and even has video caller ID! Simply plug in your digital camera or camcorder to show pictures or live video to anyone, anywhere in the world. The VisiFone is even compatible with corporate video conferencing systems and the new 3G video cell phones.

- **Digital, CD-Quality WideBand Audio**
- **Two-Way, TV-Quality Video Communications**

- **Full Duplex, Digital WideBand Speaker Phone**
- **Video and/or Audio Answering Machine***
- **999 Number Address and Phone Book**
- **Plug Into Any Size Television For a Life Size Video Call**
- **CCD Digital Camera**

The VisiFone Home Phone Base Station

Simply plug your existing home phone system into the VisiFone and get VoIP throughout your home. No other equipment or fees required. Or get multiple VisiFones and hear CD-quality audio and see TV-quality video everywhere in your home. Installation of the VisiFone is simple, it is truly plug and play.

No PC Required

Digital VoIP services offer an amazing array of features including the ability to see your voice mails, send certain callers to voice mail or have special calls "follow you" to any or all the numbers you choose. But until the VisiFone, access to many of these features has only been on a PC. Not with the VisiFone! Depending on your carrier, you can access all of your VoIP features right on the VisiFone. No more listening to 20 sales calls to find that important message from your mother or your office. With the VisiFone the list is right on the screen. You can instantly view your voice mails and select the ones to delete or call back with a single button.
